Education

Babes-Bolyai University

Sep. 2021- Jun. 2024

B.Sc. Computer Science and Mathematics

Relevant Courses: Object Oriented Programming (C++), Algorithms and Programming (Python), Data Structures, Databases (SQL), Operating Systems (Linux), Web Programming (HTML, CSS & JavaScript)

Experience

Navitech Systems

Dec. 2025 – Present

Junior Full-Stack Software Developer

- Contributed to multiple internal web applications, implementing frontend interfaces with React / Svelte and backend REST APIs with NestJS, backed by PostgreSQL.
- Built **LinguaChat**, a native Android messaging app (Kotlin + Jetpack Compose) with AI-powered message translation using **OpenRouter + Google AI** and end-to-end encryption, JWT authentication, **Firestore FCM** push notifications, and encrypted local storage.
- Worked on **Bumble Ads** (EU-funded), a B2B SaaS tool that helps businesses find and reach potential clients automatically — built on a **NestJS** API, **Kubernetes**-based scraping infrastructure, and a **Python** AI agent for lead qualification, using **Perplexity AI / OpenRouter** for company research and **Gmail/Outlook OAuth** for email outreach.

Projects

Suceava Live Bus Map

Jan. 2026

Real-time bus tracking and route planner

TypeScript, Next.js, React, Leaflet, Node.js

- Developed a full-stack web application in **TypeScript** using **Next.js** and **React**, integrating **Leaflet** for interactive map rendering and custom markers/polylines.
- Implemented backend API routes in **Node.js** to fetch live GPS data, persist bus traces, and generate per-line routes.
- Built a data-cleaning and geometry pipeline to transform raw GPS points into stable route polylines.
- Designed a route planner supporting direct and 1-transfer trips, computing boarding/transfer stops based on proximity and line intersections and returning walk + ride segments.
- Added geolocation features to track the user's position, compute the nearest bus, and highlight the best approaching bus using direction-aware route projection.

LinguaChat

Feb. 2026

Live translation messaging app

Jetpack Compose, Typescript, SvelteKit, Git

- Built LinguaChat, a real-time multilingual chat platform with private messaging and automatic translation
- Implemented encryption for messages so that conversations stay private and protected
- Developed the app for Android (Jetpack Compose) and web (SvelteKit + Typescript)
- Integrated authentication and account flows using better-auth, plus real-time chat features like typing status and media messaging.

Cabo Card Game

Apr. 2026

Multiplayer card game

Swift, Kotlin

- Built native iOS and Android apps for the Cabo card game and shipped it on both App Store and Google Play platforms
- Implemented two networking modes: online play over WebSockets and same-network discovery (Bonjour / NSD) with peer connections
- Designed a cross-platform system so users on both Android and iOS can play together by using a JSON wire protocol

Skills

Languages:

Python, C++, C#, SQL, HTML, CSS, JavaScript, Typescript, Kotlin, Swift

Frameworks:

React, Next.js, Svelte, Nest.js, Node.js, Jetpack Compose, OAuth, SwiftUI

Technologies & Tools:

Git, Linux, Postman, Docker, Android SDK, WebSockets

Databases:

MySQL, PostgreSQL
